

PHILODENDRON VERRUCOSUM

Cheat Sheet

LIGHT

Bright, indirect
light or filtered light.

TEMPERATURE

Loves warmer temperatures
above 68°F (20°C).

WATERING

Keep the soil
moist but
never soggy.

HUMIDITY

High humidity
above 60% produces
the best results.

PROPAGATION

Philodendron Verrucosum
is best propagated through
stem cuttings.

GROWTH

This aroid grows up
to 3 feet (90cm) in height.
Use a moss pole to support
this climbing Philodendron.

TOXICITY

If ingested, it can
irritate the throat,
cause swallowing
problems and more.
Keep away from
children and pets.

SOIL

Use an airy aroid potting
soil mix. Try 30% potting soil,
30% orchid bark, 30% perlite
and 10% charcoal)

(RE)POTTING

These plants grow
extensive root systems, so
a bigger pot is recommended.

PESTS & DISEASES

Thrips, spider mites,
fungus gnats, whiteflies,
mealybugs & aphids. Use
neem oil or rubbing alcohol
to get rid of these pests.

FERTILIZER

Use slow-release fertilizer.
Fertilize at least 3 times
a year. If you don't fertilize
your plant, it will grow very slowly.

COMMON PROBLEMS

YELLOW LEAVES: It can be caused by direct sunlight or overwatering.

Move the plant to a spot with indirect light and reduce frequency of watering.

DROOPING LEAVES: Drooping leaves in Philodendron plants can either be
a cause of overwatering or underwatering.
