

POTHOS N'JOY

plant care sheet

LIGHT

Moderate light. Can tolerate low light.

TEMPERATURE

The ideal temperature range is 65°F to 85°F (18°C to 29°C).

WATERING

Let the top 1-2 inches of the soil dry out between waterings.

HUMIDITY

Doesn't mind low humidity levels. For optimal growth, however, 50 to 70% is best.

PROPAGATION

Pothos N'Joy is easily propagated through stem cuttings.

GROWTH

Grows very tall, up to 10 feet (3 meters) in height.

TOXICITY

Contains toxins. Keep it away from children and pets.

SOIL

Pothos N'Joy is not picky about soil.

A well-draining potting mix does just fine.

(RE)POTTING

Repot when the plant becomes root-bound.

Use a pot with drainage holes.

PESTS

Pothos N'Joy is not particularly susceptible to pests. Mealybugs, spider mites and scale insects sometimes fancy this plant, though.

FERTILIZER

Pothos N'Joy is a light feeder. Use a balanced fertilizer during growing season.

COMMON PROBLEMS

STUNTED GROWTH: Often caused by nutrient deficiencies, insect/pest infestations or too little light. Tolerates low light but grows much faster in sunnier locations.

BROWN SPOTS: Likely caused by overwatering or too much light. Keep out of direct sunlight; such exposure causes the leaves to burn, which is why they turn brown.
